# FIELD STUDIES

A new dimension in reservoir evaluation.

Three-dimensional hydrocarbon volume grid

Schlumberger Field Study is a unified interpretation of wireline measurements, core and sample data done on a field wide basis. Parameters such as reservoir thickness, geometry, distribution of porosity and permeability and hydrocarbon saturation are estimated together with their spatial integration to obtain void volume, hydrocarbon in place etc ....

These factors which are crucial for the optimum development and productivity of your field are computed in Schlumberger Field Study.

The Ultimate answer.

Telex: AA24685

Telephone: 929-7255

Servicing the Australian off-shore oil exploration industry since 1968.

The Company owns a fleet of nine off-shore supply and anchor handling vessels, all built in Australia, ranging from 1700 horsepower for general supply work to 6000 horsepower ultra-modern, efficient anchor handling and towing/supply vessels.

Foreign flag vessels are also available from our partners Tidewater Inc. of New Orleans should no Australian flag ships be available.

Prospective Charterers may be assured of the best possible attention from an enthusiastic team fully conversant with Australian maritime conditions.

We look forward to your enquiries.

## EROMANGA BASIN, AUSTRALIA

### PETROLEUM PROSPECTS

by M.J. WILTSHIRE

A COMPILATION OF BASIC DATA AND SOME INTERPRETATIONS THEREON. Including:—

- regional map compilations of geologic and geophysical data
- petroleum exploration lease boundaries and interest holders
- petroleum exploration and deeper water wells location maps
- data summary sheets of approx. 140 petroleum exploration wells
- listings of previous work (seismic surveys, petroleum exploration wells, water wells with G.R. logs)
- stratigraphic review study
- stratigraphic cross sections
- computer tape containing digitized well logs (G.R. and Sonic) of approx. 100 petroleum wells and G.R. logs of 125 water wells over section of interest.

**THIS IS THE DATA BASE FOR FURTHER GEOLOGIC STUDY OF THE EROMANGA BASIN.**

## CANADIAN OIL AND GAS TECHNOLOGY

### ... Your Pipeline to Better Profits

For more than 50 years, Canadians have been in the forefront of oil and gas development. In the Middle East, in the Arctic and now in Australia, on and offshore, Canadian oil and gas engineers have overcome the problems posed by harsh environments, extreme climatic conditions and vast distances. In oil and gas exploration, production, transportation and processing, Canadians have developed new ideas, new equipment, new techniques - - all designed to reduce expenditures and justify investments. Today, Canadian know-how and technical ability rank with the world's best.
