

Bibliography of the history of Australian science, no. 40, 2018/9

Compiled by Helen M. Cohn

eScholarship Research Centre, The University of Melbourne. Email: cohnhr@gmail.com

This, the 40th bibliography, includes material published largely in the twelve months to September 2019 relating to the history of science and technology in Australia and its near neighbours, including New Zealand, Papua New Guinea and islands of the Pacific Ocean, and Antarctica. Included are publications related to the natural sciences (physical sciences, biological sciences, earth sciences and mathematics), some applied sciences (including medical sciences, agriculture, engineering and technology), and human sciences. Biographical items on practitioners of these sciences are also included.

In compiling this bibliography an extensive range of journals was scanned for relevant articles, books and reviews on the subjects covered. Library resources have been invaluable in finding relevant material. These principally include the Library at The University of Melbourne, the State Library of Victoria, the National Library of Australia and the National Library of New Zealand Te Papa Mātauranga O Aotearoa.

A number of people provided information on items for inclusion and the compiler is most grateful to them. Staff of the eScholarship Research Centre at the University of Melbourne gave valuable assistance in compiling the bibliography, including Ailie Smith, Gavan McCarthy and Helen Morgan. Thanks are also due to Dr Monika Wells who cast her expert editorial eye over the bibliography. Authors and readers often have sources of information that escape the attention of the Compiler and they are encouraged to alert her to material they know of for inclusion in the next issue.

Please note that the documentation style of the Encyclopedia of Australian Science (<http://www.eoas.info/>) has been used in this bibliography to facilitate the subsequent use of the entries in the encyclopedia.
