This is a bibliography of material relating to the history of science and technology in the Australasian region. Science and technology are interpreted broadly to include physical, earth and biological sciences (the natural sciences); some of the applied sciences (including medical and health sciences, agriculture and related subjects, and engineering and technology); and human sciences (anthropology and psychology). Geographic areas covered include Australia, Antarctica, New Zealand, New Guinea and islands close to Australia. Biographical references are of particular importance.

Sources used in compiling the *Bibliography* include an extensive range of journals and the digital resources of several of Australia's most comprehensive libraries. Material included ranges from books and reviews to journal articles and sections from encyclopaedic works. Theses and electronic publications are also included where relevant.

Assistance in compiling the bibliography has come from several sources and proved invaluable. It is a pleasure to thank Tom Darragh, Gavan McCarthy, Ken McInnes and Sara Maroske for their input. Monika Wells, wearing her editorial hat, invariably finds errors that the compiler has missed. Readers are urged to let the compiler know about their own publications and others of which they may be aware: they probably have sources of information that have escaped the attention of the compiler. Information may be sent to the email address above.

Please note the bibliography is a joint project with the *Encyclopedia of Australian Science and Innovation* (<http://www.eoas.info/>) and adopts the documentation style of the *Encyclopedia*.

History of Australian science—general

1. Ashenden, Dean, *Telling Tennant's story: the strange career of the great Australian silence* (Collingwood, Vic.: Black Inc., 2022), 338 pp.

20. Noon, Karlie; and de Napoli, Krystal, *Astronomy: sky country* (Port Melbourne: Thames and Hudson, 2022), 195 pp. From the Thames and Hudson website: What do you need to know to prosper for 65,000 years or more? The First Knowledges series provides a deeper understanding of the expertise and ingenuity of Indigenous Australians. Aboriginal and Torres Strait Islander people are the oldest scientists in human history. Many First Peoples regard the land as a reflection of the sky and the sky a reflection of the land. Sophisticated astronomical expertise embedded within the Dreaming and Songlines is interwoven into a deep understanding of changes on the land, such as weather patterns and seasonal shifts, that are integral to knowledges of time, food availability, and ceremony. In *Astronomy: Sky Country*, Karlie Noon and Krystal De Napoli explore the connections between Aboriginal environmental and cultural practices and the behaviour of the stars, and consider what must be done to sustain our dark skies, and the information they hold, into the future.

History of natural sciences—biological sciences

25. Cumpston, Zena; Fletcher, Michael-Shawn; and Head, Lesley, *Plants: past, present and future* (Port Melbourne: Thames and Hudson, 2022), 212 pp. From the Thames and Hudson website: What do you need to know to prosper as a people for at least 65,000 years? The First Knowledges series provides a deeper understanding of the expertise and ingenuity of Indigenous Australians. Plants are the foundation of life on Earth. Aboriginal and Torres Strait Islander peoples have always known this to be true. For millennia, reciprocal relationships with plants have provided both sustenance to Indigenous communities and many of the materials needed to produce a complex array of technologies. Managed through fire and selective harvesting and replanting, the longevity and intricacy of these partnerships are testament to the ingenuity and depth of Indigenous first knowledges.

Plants: Past, Present and Future celebrates the deep cultural significance of plants and shows how engaging with this heritage could be the key to a healthier, more sustainable future.

53. Flakelar, Danielle Carney; and O’Gorman, Emily, ‘Wayilwan women caring for Country: dynamic knowledges, decolonising historical methodologies, and colonial explorer journals’, *Journal of Australian studies*, 47 (1) (2023), 160–80. <https://doi.org/10.1080/14443058.2022.2153378>. Abstract: “This article presents research from an ongoing collaborative project between two women—an Aboriginal woman and senior Wayilwan cultural knowledge holder, and an academic of European descent—that aims to closely and critically re-read Australian colonial and later historical sources for Wayilwan women’s knowledge of Country and community. In this article, we specifically focus on the journals of colonial explorers John Oxley, Charles Sturt and Thomas Mitchell, who travelled through Wayilwan Country in the early to mid-19th century. We begin by outlining our collaborative methodology, contextualising Wayilwan Country and introducing these journals. We then examine the journals in terms of four interlinked Wayilwan women’s knowledges: river knowledge, fire knowledge, grain and yam knowledge, and care of children and the elderly. In undertaking this research,

we aim to contribute to decolonising methods and methodologies, address harmful disengagements with Aboriginal women’s practices.”

55. Langton, Marcia; and Corn, Aaron, *Law: the way of the ancestors* (Port Melbourne, Vic: Thames and Hudson, 2023), 227 pp. *From Thames and Hudson website: Law is culture, and culture is law*. Given by the ancestors and cultivated over millennia, Indigenous law defines what it is to be human. Complex and evolving, law holds the keys to resilient, caring communities and a life in balance with nature. Marcia Langton and Aaron Corn show how Indigenous law has enabled people to survive and thrive in Australia for more than 2000 generations. Nurturing people and places, law is the foundation of all Indigenous societies in Australia, giving them the tools to respond and adapt to major environmental and social changes. But law is not a thing of the past. These living, sophisticated systems are as powerful now as they have ever been, if not more so.

99. McKenna, Mark, *Return to Uluru: a killing; a hidden history; a story that goes to the heart of the nation* (Carlton, Vic.: Black Inc., 2021), 256 pp. From Black Inc.: When Mark McKenna set out to write a history of the centre of Australia, he had no idea what he would discover. One event in 1934—the shooting at Uluru of Aboriginal man Yokununna by white policeman Bill McKinnon, and subsequent Commonwealth inquiry—stood out as a mirror of racial politics in the Northern Territory at the time. But then, through speaking with the families of both killer and victim, McKenna unearthed new evidence that transformed the historical record and the meaning of the event for today. As he explains, 'Every thread of the story connected to the present in surprising ways.' In a sequence of powerful revelations, McKenna explores what truth-telling and reconciliation look like in practice.
