### EDITORIAL

- Conservation and management of Australasian birds. *H. F. Recher.* 171

#### Theme: Conservation and management of Australasian birds

- Managing bird populations: for whom and at what cost. *J. L. Craig.* 172
- Impact and response: a review of the effects of fire on the Australian avifauna.  
*J. C. Z. Woinarski and H. F. Recher.* 183
- Fire and its impact on avian population dynamics. *G. B. Baker, E. B. Dettmann and S. J. Wilson.* 206
- Responses by birds to fire regime and vegetation at the wet sclerophyll/tropical rainforest boundary. *A. Chapman and G. N. Harrington.* 213
- Effects of an extensive wildfire on birds in far eastern Victoria. *R. H. Loyn.* 221
- The decline, response to fire, status and management of the Eastern Bristlebird. *J. Baker.* 235
- Land use, habitat change and the conservation of birds in fragmented rural environments: a landscape perspective from the Northern Plains, Victoria, Australia. *A. F. Bennett and L. A. Ford.* 244
- Use of remnant forest habitat by birds during winter in subtropical Australia: patterns and processes. *C. P. Catterall, M. B. Kingston and K. Park.* 262
- Use by birds of riparian vegetation in an extensively fragmented landscape. *A. M. Fisher and D. C. Goldney.* 275
- Species interactions between the White-winged Chough and Australian Magpie in a fragmented landscape. *S. J. Cox and J. J. Bauer.* 289
- Dispersal of the Blue-breasted Fairy-wren in fragmented habitat in the wheatbelt of Western Australia. *M. Brooker and L. Brooker.* 295
- Extinct and introduced vertebrate species in New Zealand: a loss of biodistinctiveness and gain in biodiversity. *K.-J. Wilson.* 301
- Genetics and the conservation of Australian birds. *J. Norman and L. Christidis.* 306

Papers submitted to *Pacific Conservation Biology* are vigorously reviewed and edited. Nonetheless, the views put by authors are their own and do not necessarily reflect those of the editors or the Publisher.

### COPYRIGHT

Submission of a paper to *Pacific Conservation Biology* will be taken to imply that it presents original unpublished work, not under consideration for publication elsewhere. By submitting a manuscript, the authors agree that the copyright for their article is transferred to the Publisher if and when the article is accepted for publication. The copyright covers the exclusive rights to reproduce and distribute the article, including reprints, photographic reproductions, microfilm or any other reproductions of similar nature, and translations.

Permission to publish illustrations must be obtained by the author before submission and any acknowledgements should be included in the captions.

ON FRONT COVER: The Port Lincoln Parrot *Platycercus zonarius* is one of the few Australian birds to benefit from European settlement. The Port Lincoln is abundant throughout southwestern Western Australia and is the most common parrot in the Perth metropolitan region. The Port Lincoln has responded to the increased availability of grain, weed seeds and fruits associated with human settlement and there is some evidence of a significant increase in abundance since the turn of the century. At times, the seeds of introduced plants may account for more than 80% of its diet. The White Cedar *Melia azedarach* on which this bird is feeding has been widely planted in the west as an ornamental and street tree. Photograph by W. E. Davis, Jr.
