## Supplementary Data

**Figure S1.** Correlation of ambient temperature ( $^{\circ}\text{C}$ ) with the call duration, note duration, dominant frequency, notes per call, pulses per note and note rate for *Litoria ewingii*, *Litoria verreauxii*, *Litoria paraewingi*, *Litoria sibilus* and *Litoria calliscelis*. Lines represent linear regressions. The statistical significance of each parameter can be seen in Table S1.

**Table S1.** Pearson's correlation coefficient, pvalue and the Bonferroni adjusted p-value for ambient temperature and advertisement call parameters in *Litoria ewingii*, *Litoria verreauxii* *Litoria paraewingi*, *Litoria sibilus* and *Litoria calliscelis*. Asterisks signify values with statistical significance.

Call parameter	Species	R- value	P-value	Bonferroni adjusted P-value
Call duration	<i>L. ewingii</i>	-0.260	<0.001*	0.001*
	<i>L. verreauxii</i>	-0.354	<0.001*	<0.001*
	<i>L. paraewingi</i>	-0.107	0.571	3.999
	<i>L. sibilus</i>	-0.746	0.089	0.620
	<i>L. calliscelis</i>	-0.237	0.078	0.548
Note duration	<i>L. ewingii</i>	-0.504	<0.001*	<0.001*
	<i>L. verreauxii</i>	-0.277	<0.001*	<0.001*
	<i>L. paraewingi</i>	-0.559	0.001*	0.009
	<i>L. sibilus</i>	-0.813	0.049	0.344
	<i>L. calliscelis</i>	-0.314	0.019	0.128
Dominant frequency	<i>L. ewingii</i>	0.229	0.001*	0.004*
	<i>L. verreauxii</i>	0.389	<0.001*	<0.001*
	<i>L. paraewingi</i>	0.110	0.562	3.937
	<i>L. sibilus</i>	0.917	0.010	0.070
	<i>L. calliscelis</i>	-0.043	0.7545	5.282
Notes per call	<i>L. ewingii</i>	0.241	0.001*	0.002*
	<i>L. verreauxii</i>	-0.031	0.654	4.582
	<i>L. paraewingi</i>	0.404	0.026*	0.187
	<i>L. sibilus</i>	0.679	0.138	0.969
	<i>L. calliscelis</i>	-0.004	0.978	6.844
Pulses per note	<i>L. ewingii</i>	-0.077	0.249	1.744
	<i>L. verreauxii</i>	0.022	0.751	5.263
	<i>L. paraewingi</i>	-0.177	0.346	2.427
	<i>L. sibilus</i>	-0.633	0.177	1.24
	<i>L. calliscelis</i>	0.21	0.120	0.843
Note rate	<i>L. ewingii</i>	0.564	<0.001*	<0.001*
	<i>L. verreauxii</i>	0.375	<0.001*	0.841

	<i>L. sibilus</i>	0.117	0.826	5.782
	<i>L. calliscelis</i>	0.404	0.002*	0.014

**Table S2.** Male advertisement call parameters for *Litoria ewingii*, *Litoria verreauxii*, *Litoria paraewingi*, *Litoria sibilus* and *Litoria calliscelis*. The data table shows the maximum, minimum and mean of each temporal call parameter, inclusive of outliers.

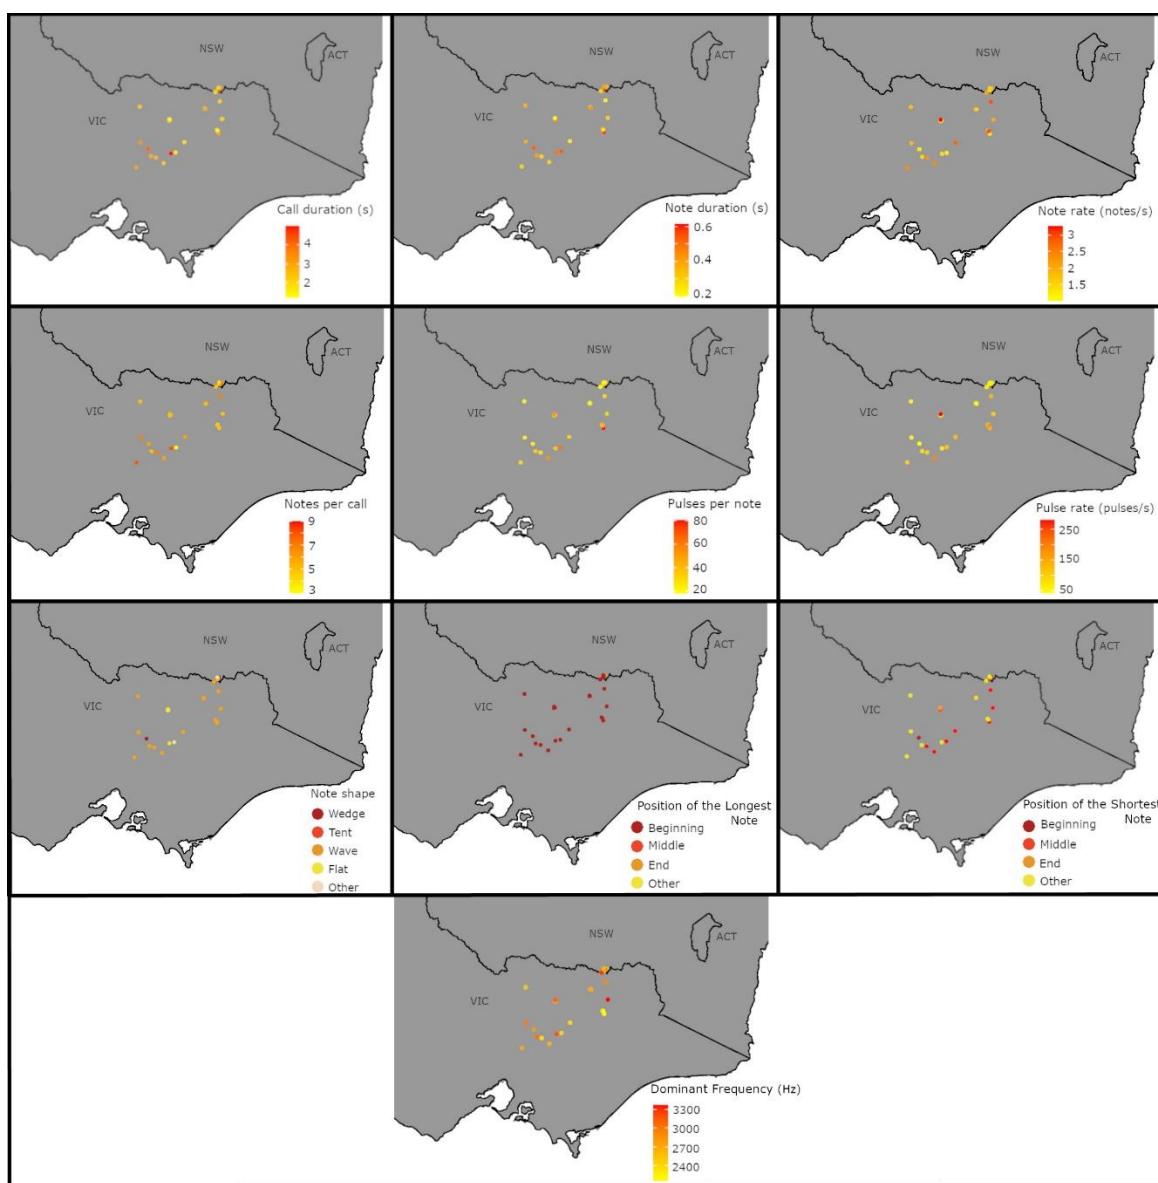

Parameters with asterisks indicate those whose result is shown as a mode (as opposed to a range with the mean). See methods (Table 1) for parameter definitions.

	Number of calls (n)	Call duration (s)	Note duration (s)	Dominant frequency (Hz)	Notes / call	Pulses / note	Note rate (notes/s)	Pulse rate (pulses/s)	Note shape *	Longest note *	Shortest note *
<i>L. ewingii</i>	236	1.05-6.66 (2.44)	0.10-0.48 (0.22)	1817-3167 (2472)	4-22 (9)	10-57 (24)	1.44-6.35 (3.33)	33.59-205.69 (108.56)	Wedge	Beginning	Other
<i>L. verreauxii</i>	210	0.9-6.36 (3.1)	0.1-0.49 (0.23)	1781-3153 (2510)	4-22 (11)	13-76 (31)	1.38-6.56 (3.43)	60.55-256.78 (136.58)	Wave	End	Beginning

<i>L. calliscelis</i>	59	1.57-5.66 (3.35)	0.09-0.23 (0.16)	2063-2809 (2444)	7-32 (16)	10-42 (19)	2.72-7.62 (4.60)	43.02-192.68 (112.18)	Other	End	Beginning

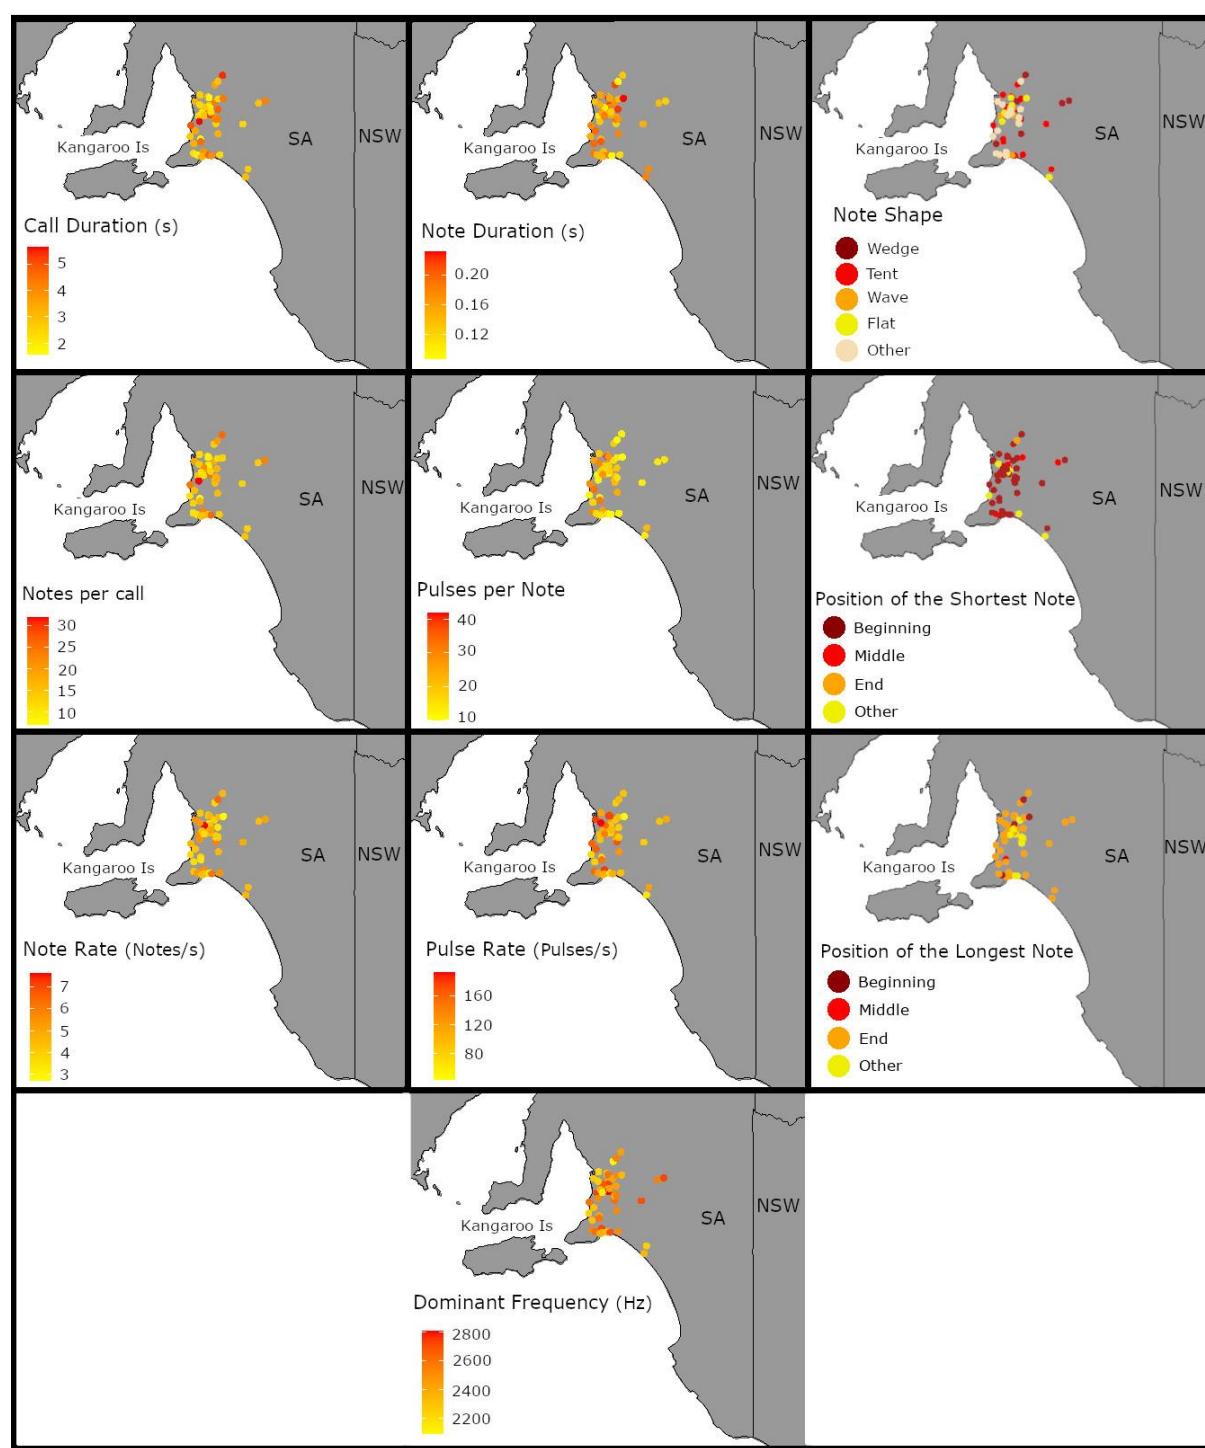

**Table S3.** List of *Litoria ewingii*, *Litoria verreauxii*, *Litoria paraewingi*, *Litoria sibilus* and *Litoria calliscelis* outliers (above the 3rd quartile + 1.5x interquartile range or below the 1st quartile - 1.5x interquartile range) that were identified and removed during data analysis to create Figure 4 and Table 2. Bolded fields indicate the reason/s why a recording was identified as an outlier.
