

AUSTRALIAN JOURNAL OF

CHEMISTRY

AN INTERNATIONAL JOURNAL FOR CHEMICAL SCIENCE

publishing research papers from all fields of chemical science, including synthesis, structure, new materials, macromolecules, supramolecular chemistry, biological chemistry, nanotechnology, surface chemistry, and analytical techniques.

Volume 55, 2002
© CSIRO 2002

All enquiries and manuscripts should be directed to:

_ccdc_disorder
;
Conformational disorder of the isopropyl carbon bound to oxygen in
four isopropoxide groups (1 in one independent molecule, 2 in the
second
independent molecule)
modelled by two site occupancies for C4A, C14A, C16A & associated
hydrogens &
C4B, C14B, C16B & H's with the latter atoms refined
using one common isotropic U (0.042(3)A^2^); final A atom occupancies
are
0.893(8), 0.840(9) & 0.74(1) respectively.
Conformational disorder of one methyl isopropyl carbon (C15) modelled
similarly with final U and occupancies 0.063(1)A^2^, 0.542(9).

_refine_special_details
;
    Refinement of F^2^ against ALL reflections. The weighted R-factor wR
and
    goodness of fit S are based on F^2^, conventional R-factors R are
based
    on F, with F set to zero for negative F^2^. The threshold expression
of
    F^2^ > 2sigma(F^2^) is used only for calculating R-factors(gt) etc.
and is
    not relevant to the choice of reflections for refinement. R-factors
based
    on F^2^ are statistically about twice as large as those based on F,
and R-
    factors based on ALL data will be even larger.

_geom_special_details
;
  All esds (except the esd in the dihedral angle between two l.s.
planes)
  are estimated using the full covariance matrix. The cell esds are
taken
  into account individually in the estimation of esds in distances,
angles
  and torsion angles; correlations between esds in cell parameters are
only
  used when they are defined by crystal symmetry. An approximate
(isotropic)
  treatment of cell esds is used for estimating esds involving l.s.
planes.
