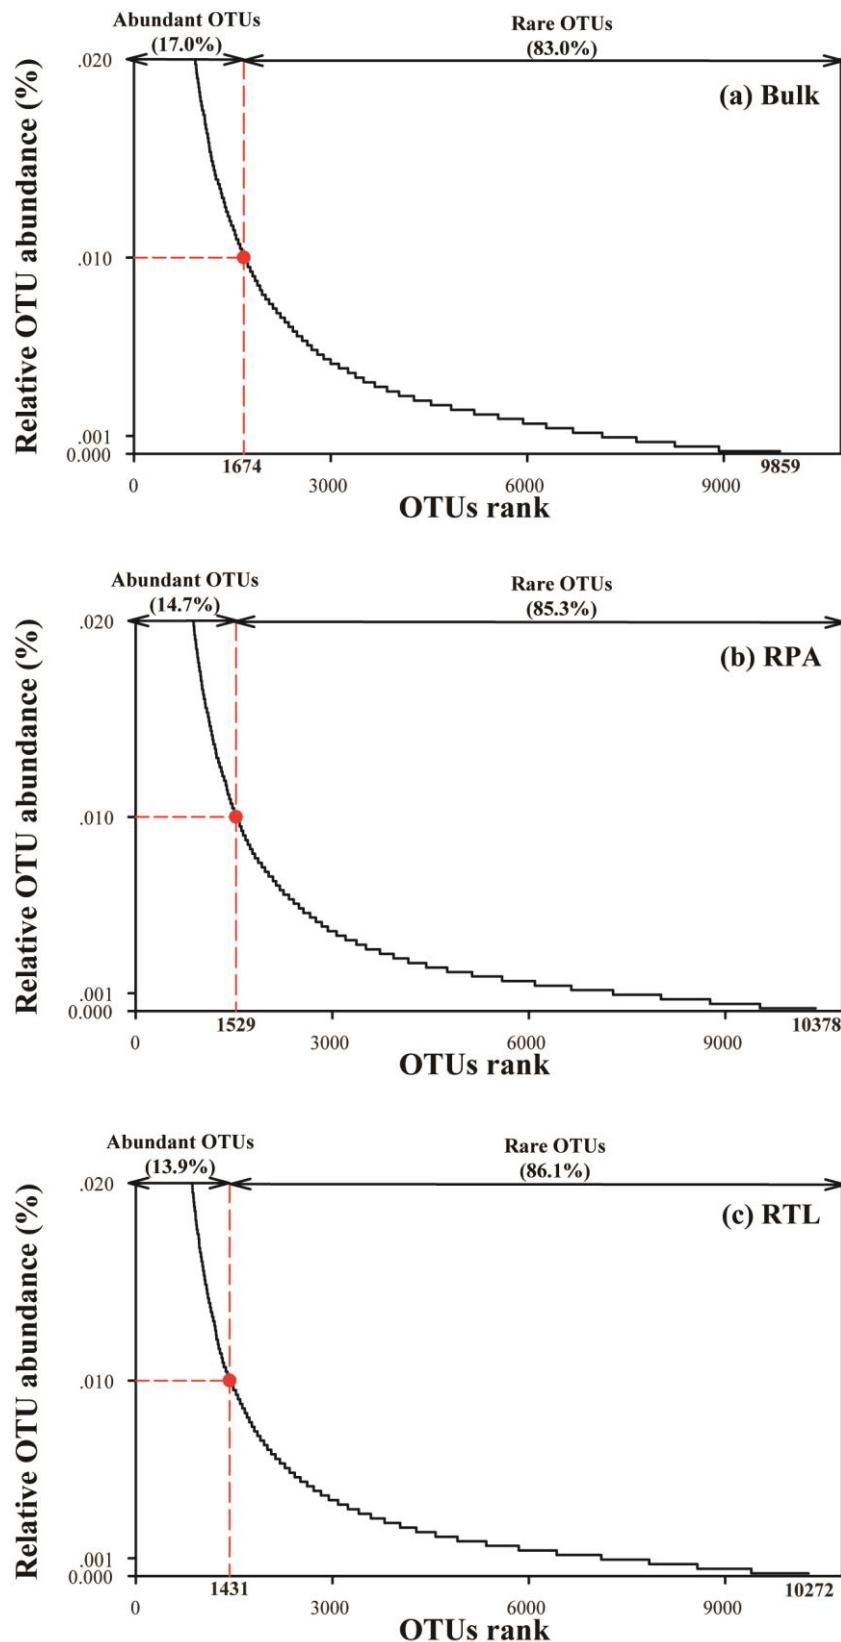

Fig. S1. Rank abundance curve for operating taxonomic units (OTUs) in different groups. The OTUs were defined at the 97% similarity level. (a) Bulk, bulk soil; (b) RPA, rhizosphere of *P. australis*; (c) RTL, rhizosphere of *T. lutarioriparia*.

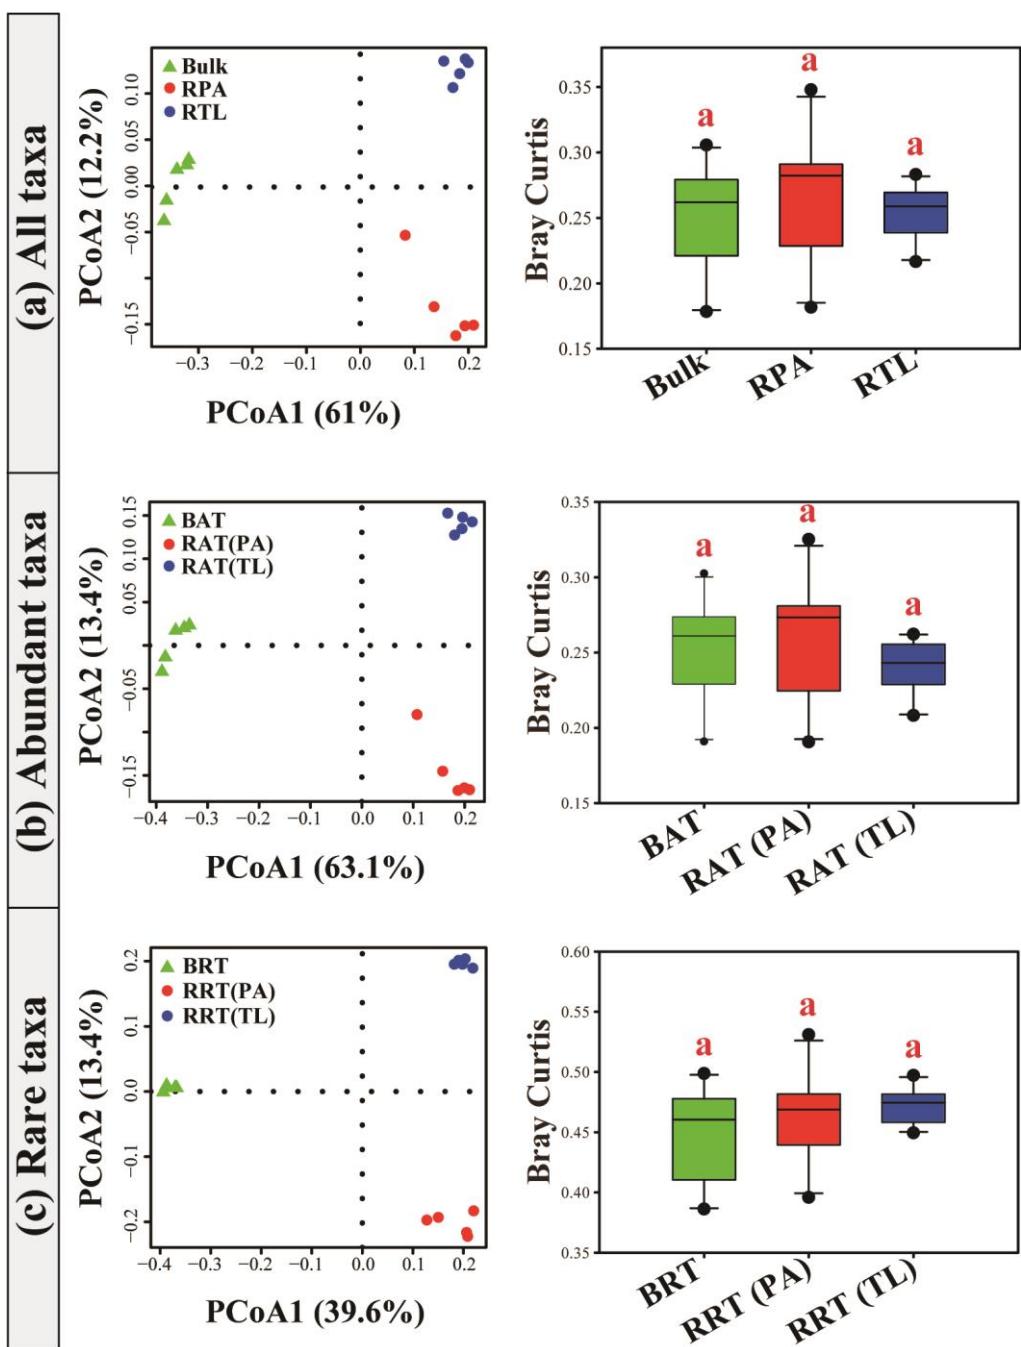

Fig. S2. Comparisons of bata-diversity among different groups. Left, principal coordinate analysis (PCoA) of bacterial communities based on Bray–Curtis distance. Right, box plots showing the dissimilarity of bacterial communities across different samples based on Bray–Curtis distance. Different lowercase letters in bold above boxes represent significant differences in different groups (one-way ANOVA test). (a) All taxa, whole bacterial taxa; (b) Abundant taxa, abundant bacterial taxa; (c) Rare taxa, rare bacterial taxa. BAT, bulk abundant taxa; RAT (PA), rhizosphere abundant taxa of *P. australis*; RAT (TL), rhizosphere abundant taxa of *T. lutarioriparia*; BRT, bulk rare taxa; RRT (PA), rhizosphere rare taxa of *P. australis*; RRT (TL), rhizosphere rare taxa of *T. lutarioriparia*.

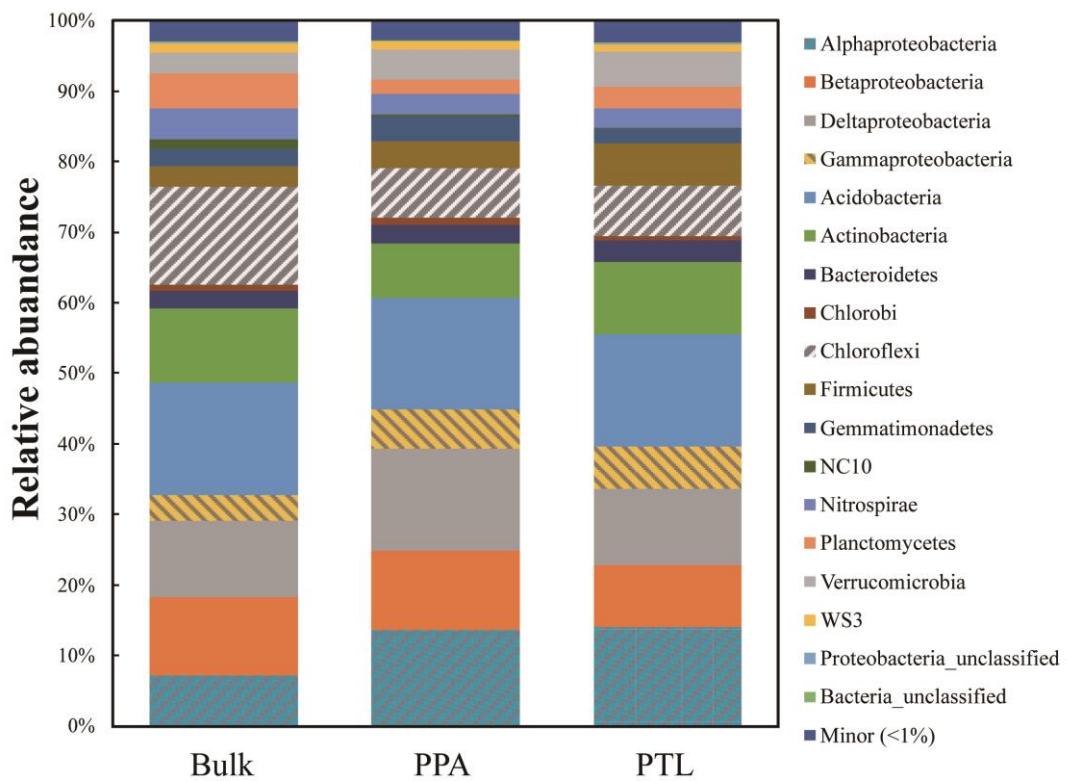

Fig. S3. Relative average abundance of dominant bacterial taxa at the level of phylum or subphylum in different groups. Bulk, bulk soil; RPA, rhizosphere of *P. australis*; RTL, rhizosphere of *T. lutarioriparia*.

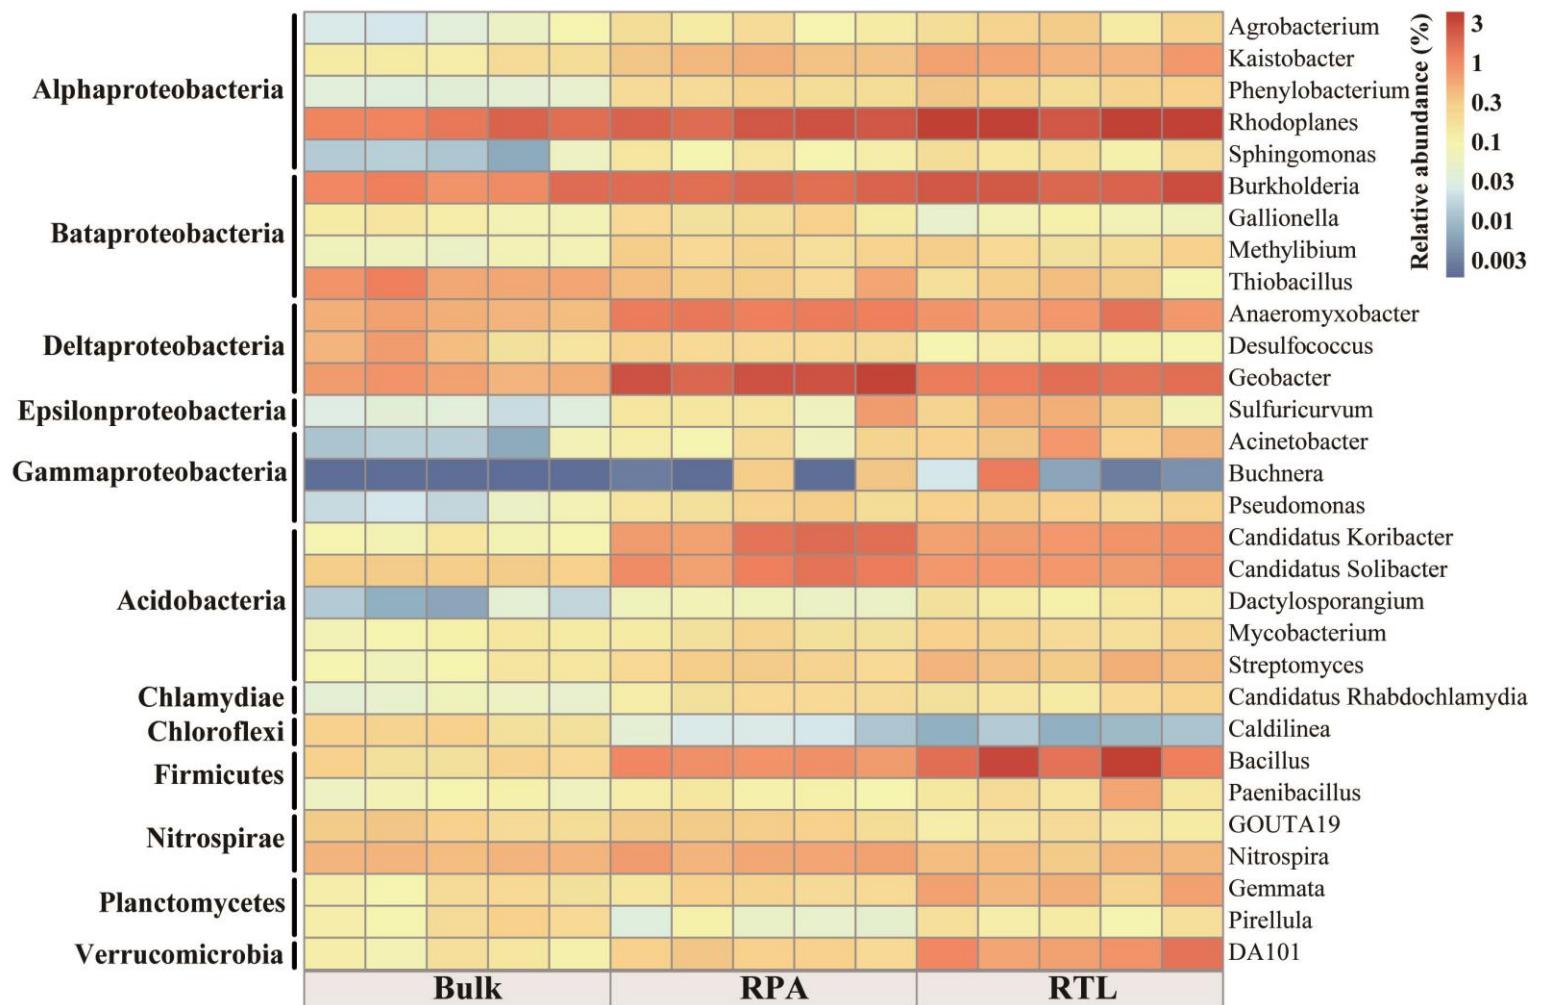

Fig. S4. Heatmap illustrating the distribution of bacterial community at the level of genus in different groups. The right column represents the genus; the left column represents the phylum or subphylum. Bulk, bulk soil; RPA, rhizosphere of *P. australis*; RTL, rhizosphere of *T. lutarioriparia*.

Table S1. The results of analysis of similarities (ANOSIM) and permutational multivariate analysis of variance (PERMANOVA) of pair-wise community comparisons between soil samples based on Bray–Curtis distance matrices

P values < 0.05 in bold. *, *P* < 0.05; **, *P* < 0.01; Bulk, bulk soil; RPA, rhizosphere of *P. australis*; RTL, rhizosphere of *T. lutarioriparia*

Groups	ANOSIM		PERMANOVA	
	<i>R</i>	<i>P</i>	<i>R</i> ²	<i>Pr</i> (> <i>F</i>)
Bulk v. RPA	1	0.017*	0.70644	0.006**
Bulk v. RTL	1	0.007**	0.73368	0.011*
RPA v. RTL	0.956	0.008**	0.37782	0.006**

Table S2. Module hubs and connectors in the species-species co-occurrence networks

p_, c_, o_, f_ and g_ represent phylum, class, order, family and genus respectively

Region	Hubs	Number of nodes	OTU ID	Module	Mean abundance (%)	Phylum	Lowest taxonomic rank
Bulk	Module Hubs	1	OTU141717	Bulk 1	0.05	Betaproteobacteria	f_Rhodocyclaceae
		2	OTU51100	Bulk 2	0.29	Betaproteobacteria	c_Betaproteobacteria
		3	OTU83720	Bulk 3	0.08	Chloroflexi	g_Caldilinea
		4	OTU81121	Bulk 4	0.11	Gemmimonadetes	c_Gemm-1
