Supplementary material

Supplementary Figure S1. Cellular component and protein class of Asian elephant seminal plasma proteins. Categorisation of proteins were from Gene Ontology database using PANTHER (version 13.1). The graph plots the number of proteins (genes) identified for each cellular component and protein class (GO accession).

Supplementary Table S1. Asian elephant seminal plasma proteins as assessed by LC-MS/MS from pooled samples.

^A Data from *Loxodonta africana* Uniprot database. Proteins that were classified as uncharacterised in Uniprot, or identified from a non-mammalian species, were subjected to Uniprot and NCBI BLAST searching and where an orthologous protein was known in an alternate species, the name was "italicised".

^B Protein mass as predicted by peptides sequenced by MASCOT

^c Ordered by descending protein score. Protein scores are derived from ions scores as a non-probabilistic basis for ranking protein hits. A higher protein score indicates a higher probability of a non-spurious match.
