LSD (p=0.05)	18.7	26.4	47.2	92.6	15.4	7.9

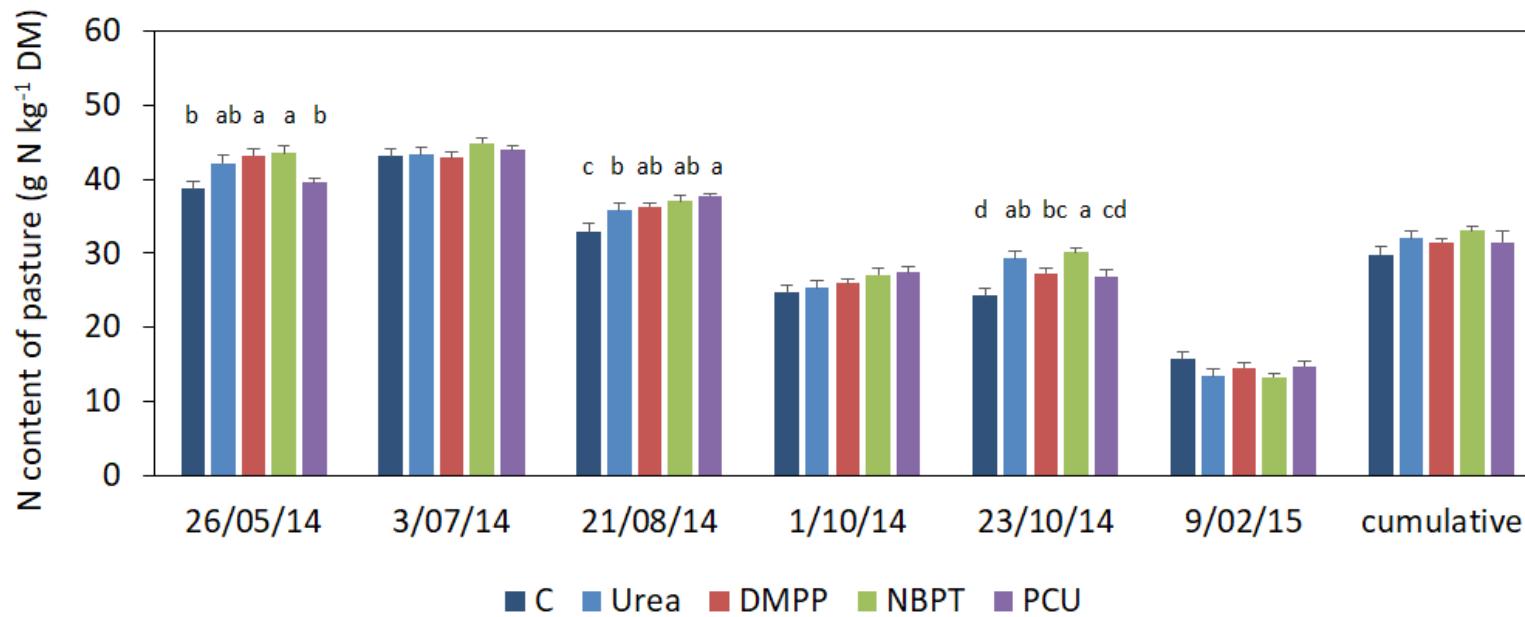

Figure S1. Nitrogen content of pasture at each harvest event, averaged for the control and for the 17, 34 and 50 kg N ha<sup>-1</sup> rate for each fertiliser treatment. Different letters above columns on each date indicate significant differences between treatments. Where no letters are provided there is no significant treatment effect on those dates.
